

Milwaukee® Introduces New M12 Cordless 3/8" Drill/Driver

08/27/09 – MILWAUKEE, WI – Milwaukee Electric Tool Corporation expands its LITHIUM-ION system with the new M12 Cordless 3/8" Drill/Driver. The only tool in its class with a metal locking chuck, the new 3/8" drill/driver features maximum bit retention and durability. In addition, the 2410-22 delivers up to 25% more torque and drills/fastens up to 35% faster than the competition.

"Up to 90% of the applications in HVAC, MRO, and woodworking involve screw driving and small hole drilling. These users often carry a drill with them throughout the day that has a capacity, weight, and size well in excess of their needs," says Paul Fry, Director of M12 for Milwaukee Electric Tool Corporation. "Without sacrificing necessary speed, power, or durability, the M12 Cordless 3/8" Drill/Driver is small enough for the user to carry in their tool belt throughout the day to increase productivity and reduce fatigue while executing most common applications."

With the introduction of the new 3/8" drill/driver and plans to grow the M12 cordless platform in 2009, Milwaukee® continues to expand its leadership position in the sub-compact category. The M12 platform includes 11 tools offering innovative solutions in power, productivity, and portability.

Specs (2410-22) · 0-1,500 RPM- high speed · 0-400 RPM- low speed · 250 in-lbs of torque · 7-3/8/16" length · 2.5 lbs
