

## **Milwaukee® Introduces New M12™ Cordless 3/8” Right Angle Drill / Driver**

10/12/09 MILWAUKEE, WI – Milwaukee Electric Tool Corporation expands its LITHIUM-ION system with the new M12™ Cordless 3/8” Right Angle Drill Driver. With a head size of only 3.75” and a 3/8” single sleeve ratcheting chuck, the new right angle drill provides maximum control and versatility in tight spaces or unpredictable situations.

“A right angle drill driver is similar to jumper cables for a car,” says Paul Fry, Director of M12™ for Milwaukee Electric Tool Corporation. “Many people do not realize they need one until they are in a tight space and need help.”

The first sub-compact right angle drill driver with a spindle lock chuck, the MILWAUKEE® M12™ Cordless 3/8” Right Angle Drill Driver is the most versatile right angle drill in the industry. Leading the way in the advancement of power tool electronics, the 2415-21 features an electronic clutch, fuel gauge, speed control and built in overload protection.

With the introduction of the new right angle drill driver and plans to grow the M12™ cordless platform in the future, MILWAUKEE® continues to expand its leadership position in the sub-compact category. The M12™ platform will include over 20 tools by the end of 2009 that offer innovative solutions in power, productivity, and portability.
