MODEL CT5104
METAL CUTTING BLADES
FOR USE WITH CLARKE CT5000 CROCODILE SAW ONLY

PERRYSBURG, Ohio – Clarke® Power Products Inc. has introduced the Crocodile Circular Saw®, which provides the ergonomics and balance of an angle grinder, while delivering the incredible cutting power of a circular saw. This powerful, compact saw has few limitations. It is outfitted with four, 3 ¼-in.-diameter blades, capable of

making straight-line razor cuts in wood, non-ferrous metals such as copper and aluminum, plastics, fiberglass, drywall, ceramic tile and marble. It even cuts conduit, pipe, and sheet steel, including truck bed diamond plate.

While many circular saws operate at 2500 rpm or less, the 4-amp Crocodile saw blade spins at 4000 rpm for solid performance. The saw's maximum depth of cut is 1-1/16 in.

"It's a go-to saw for any number of projects," said Craig Valentine, president of Clarke Power Products. "It's great for basement remodeling, handling cutouts for outlet boxes, tile flooring and kitchen backsplash jobs, cutting away rusty quarter-panels on cars, as well as custom cutouts for stereo sound system installations, plunge cuts, HVAC cutouts for whole-house humidifiers and vents, trim work, crafts, hobbies – all kinds of jobs."

Clarke Crocodile Saw/Add One

The Crocodile Saw weighs 4.0 lbs. Its elongated, cylindrical body has upper and lower cushioned, rubber grips.

The saw's adjustable depth-of-cut control knob raises or lowers the blade from 0 to 1-1/16 in. Simply, loosen the knob and slide it to the desired depth and tighten. Two, clear, Lexan™ blade guards with non-marring metal base plates are provided – one for flat surfaces and another for cutting pipe.

Changing blades is quick and easy with the tool's side-mounted spindle-lock button. Simply press the button while using the supplied Allen wrench for blade installation or removal. This saw features a dual-purpose, on/off safety switch, engineered to eliminate accidental starts. Other features include a rear vac exhaust port, front and rear air vents to dissipate heat and electronic thermal overload protection to help prevent motor

burnout. Motor brushes can be replaced and are easily accessible by removing a large cap on the tool's body.

The Crocodile Saw is bundled in a kit loaded with handy accessories including a durable, multi-pocketed, soft-sided, tool bag for storage. There's even a 24-in. laser level that projects a fine laser line for horizontal and vertical alignments. The level includes a miter gauge, which mounts to the level's base to set up cutting angles on multiple surfaces.

For ripping operations, the saw accepts an auxiliary edge guide, which mounts to the front of the saw and works with materials up to 6 in. wide. The pipe cutting blade guard attachment helps facilitate cutting PVC and copper pipe. The saw's razor sharp pipe cutting ability all but eliminates the need for deburring, which is common among conventional pipe cutters.
